Accel Business · Project Udyam Digital

One sitting from “hello” to live: voice-first advisor, one price, minutes-long KYC, live tracker

YTL Hackathon 2026 · Enterprise Track A

Team: Jayant Batra · Harshita

Platform Partner unstop

Only 7.4% of SMB leads go live — we rebuild the journey for one sitting

7.4%
lead → activation

17.6 days
lead → live

₹15,053
acquisition cost / activation

3×
status chases / customer

1. **Who first?**
   Professional offices + multi-site first (≈11% activation, 11–14% churn, best payback). Micro via a low-cost digital starter; manufacturers via experts.

2. **Needs without a salesperson?**
   Voice/chat advisor in 11 Indian languages + English. AI talks, the rule engine decides products, eligibility and one monthly price.

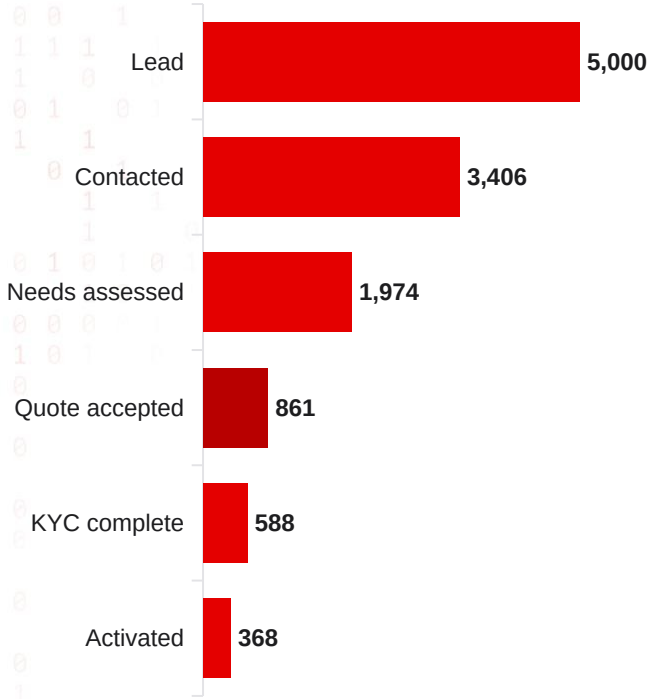

3. **Near-instant, DPDP-safe KYC?**
   Consent first → GSTIN checksum + registry → DigiLocker → upload only what's missing (OCR) → automatic cross-checks → e-sign.

4. **Role of field force & partners?**
   AI routes only what it can't close to Local Accel Experts (score, language, distance). Paid 70% on connection + 30% at 6 months.

5. **How we measure success?**
   Activation 7.4%→15% · days 17.6→≤7 · CAC ₹15,053→≤₹5,000 · churn 15.2%→≤10% · chases 3→<1.

Source: smb_leads.csv (5,000 synthetic leads, Apr–Jun 2026). Targets are our proposals.

Funnel: 4,632 of 5,000 leads leak — needs → quote converts only 44%

Step	Conv.	Lost	Top reasons (leads)	Days
→ Contacted	68%	1,594	Unreachable after 3 attempts 805; Not interested on first call 470	2
→ Needs assessed	58%	1,432	Owner had no time for a visit 531; Locked in with current provider 325	3
→ Quote accepted	**44%**	**1,113**	Price too high 414; Competitor offered cheaper plan 207	4
→ KYC complete	68%	273	Missing GST or Udyam document 94; Found paperwork too long 79	4
→ Activated	63%	220	Installation delayed beyond 21 days 98; Customer cancelled before install 53	4

INSIGHT: 2,545 of the leads lost need a visit or a quote — both are slow, human hand-offs. Removing the visit and making the quote instant attacks the two biggest leaks.

Conv. = conversion from previous stage. Days = median days from the previous stage. Source: smb_leads.csv.

Root causes: five fixable causes explain the leaks, not lack of demand

	Root cause	Evidence (leads)	Lost	What we change
1	**Sales depends on a physical visit**	Owner had no time 531 · visit not scheduled 296 · only wanted a mobile plan 280	**1,107**	Voice/chat advisor in-app; SIM-only fast path; no visit needed
2	**Quote is slow, opaque, not need-fitted**	Price too high 414 · competitor cheaper 207 · too complex 206 · too slow 179; 87% bought a bundle ≠ what they asked	**1,006**	Instant need-based quote, one monthly price, cheaper levers
3	**Paper KYC, no pre-validation**	Missing doc 94 · paperwork too long 79 · signatory away 53 · mismatch 47; 22 activated on cancelled/suspended GSTIN	**273**	GSTIN + registry first, DigiLocker, OCR checks, e-sign
4	**No feasibility check, no status visibility**	Install > 21 days 98 · not feasible 41 · 3 chase calls avg; churn 6% → 28% as chases rise	**220**	Feasibility before checkout, live tracker, proactive WhatsApp
5	**Low-intent / bad contact data**	Unreachable 805 · wrong number 319 · not interested 470; WhatsApp leads 2.8%, non-GST 2.0%	**1,594**	Owner-initiated journeys, verified mobile, propensity-ranked follow-up

Lost = leads whose recorded drop_reason maps to the cause (smb_leads.csv). Causes 1–4 are journey design; cause 5 is lead quality.

Who first: professional offices and multi-site pay back fastest

Professional offices

Wave 1 · digital

Share of leads 25%
Activation 11.1%
6-mo churn 14%
CAC / activation ₹10,695
Avg bundle ₹6,796/mo
Payback 1.6 months

Multi-site businesses

Wave 1 · digital + expert

Share of leads 15%
Activation 11.0%
6-mo churn 11%
CAC / activation ₹15,614
Avg bundle ₹31,233/mo
Payback 0.5 months

Micro retail & services

Wave 2 · digital starter

Share of leads 54%
Activation 4.1%
6-mo churn 23%
CAC / activation ₹20,007
Avg bundle ₹2,505/mo
Payback 8.0 months

Small manufacturers

Expert-led

Share of leads 6%
Activation 12.8%
6-mo churn 8%
CAC / activation ₹15,324
Avg bundle ₹19,980/mo
Payback 0.8 months

Micro · Starter

Biz Fibre 100, Business Postpaid 299, Cloud POS & Billing, Secure Wi-Fi with Guest Network

₹2,296/mo
setup ₹3,500 · 12 mo · live ~5 d

Professional · Clinic Pro

Biz Fibre 100, Cloud CCTV ×2, Cloud Email & Office Suite ×8, Cloud Backup 1 TB, Endpoint Security ×8

₹3,688/mo
setup ₹3,600 · 12 mo · live ~5 d

Multi-site · Chain Connect

Biz Fibre 100 ×4, Business Postpaid 599 ×4, Cloud POS & Billing ×4, Cloud CCTV ×8, Backup 4G/5G Failover ×4, Secure Wi-Fi with Guest Network ×4

₹15,553/mo
setup ₹34,400 · 12 mo · live ~5 d

Manufacturer · Factory Secure

Internet Leased Line 100, Business Postpaid 599 ×3, Cloud Email & Office Suite ×10, Managed Firewall, Machine Monitoring IoT ×5

₹30,791/mo
setup ₹34,000 · 24 mo · live ~30 d

Payback = CAC ÷ avg monthly bundle (revenue months). Bundles priced by our engine on product_catalogue.csv.

Needs discovery without a salesperson: talk → one price → verify → track

1 Talk

Voice or chat, 11 Indian languages + English, auto-detected. 6 short questions.

2 One price

Need-based bundle with plain reasons; toggle add-ons, 12/24 months, cheaper options.

3 Verify

Consent → GSTIN + registry → DigiLocker → upload only what's missing → e-sign.

4 Track

8-stage tracker with ETA, WhatsApp updates, auto-escalation when late.

AI talks, rules decide

Owner voice / chat → **Advisor (LLM phrases only)** → **Rule engine eligibility · price** → **Catalogue 25 products**

Facts read from any language (incl. “thirty”, “लुधियाना”, corrections); the next question is chosen by code.
Guard: replies with any price or time not computed by the engine are rejected and rewritten.
Proof: replaying all 368 real activations, the engine blocks 53 rule-breaking line items + 22 activations on cancelled/suspended GSTIN.

WHY IT MATTERS: 87% of activated customers bought a bundle different from what they asked for. Our advisor recommends from stated needs only — e.g. SIMs only if asked, 100 Mbps for ≤9 people per site, upsell max 2 optional add-ons.

Stack: Next.js · Bedrock Mantle (Kimi K2.5, Mumbai) · Sarvam STT/TTS · AWS Textract. Replay on smb_leads.csv.

Smart KYC in minutes: registry first, upload last, consent throughout

Consent per purpose → **GSTIN checksum + registry** → **Udyam registry** → **DigiLocker / Entity Locker** → **Upload only what's missing** → **Cross-checks + e-sign**

Specimen applicants: 7 of 12 verified, 5 blocked

K01	GSTIN cancelled in registry (certificate looks fine) + blank Udyam number
K05	Udyam certificate missing
K06	GSTIN fails checksum — 2 characters altered vs registry
K07	Legal name on certificate edited (≠ registry)
K11	Electricity bill 257 days old (> 90-day rule)

DPDP-by-design

Consent: Separate, withdrawable consents: KYC, voice, expert hand-off, marketing (off by default).

Purpose limitation: KYC data used only for KYC/contract, never marketing.

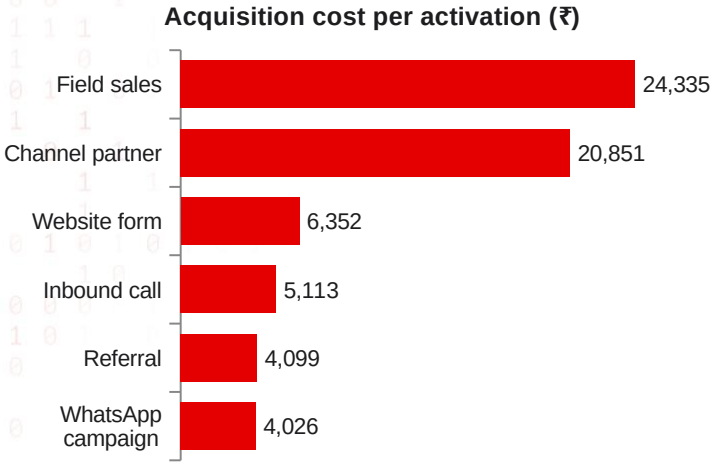

Minimisation: Registry + DigiLocker first; images read in memory, never stored.

Retention: Fields for contract period; transcripts 30 days; non-buyers 90 days.

Rights: Privacy center: view, withdraw, download, delete.

Specimen documents from kyc_documents/ (synthetic). DigiLocker and e-sign are simulated in the prototype; OCR by AWS Textract.

Partners and field force become Local Accel Experts for what AI can't close

Activation by source: referral 14.8%, inbound 9.5%, partner 8.0%, field 7.3%, web 4.3%, WhatsApp 2.8%.
Partner-sourced customers churn 19% vs field 10%.

1 Route

AI escalates on 7 triggers: repeated price objection, multi-site / manufacturer, not feasible, KYC failure, idle quote, low confidence, asks for a person.

2 Prioritise

Likelihood-to-buy score (logistic model, AUC 0.73; GSTIN +1.19 strongest). High → same day, medium → 24 h call, low → WhatsApp nurture.

3 Assign

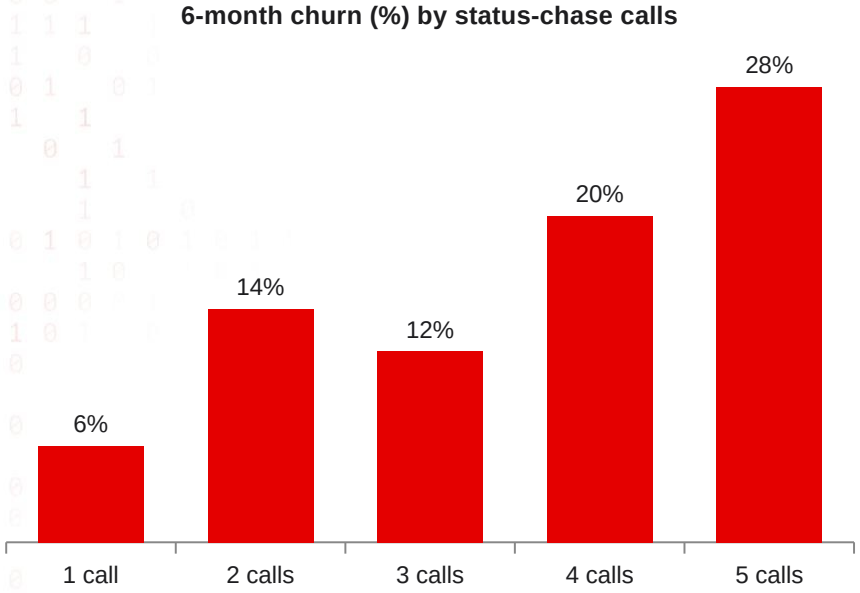

Top-3 experts by distance, language, segment specialty, track record, load — offered in turn, manager override, reason shown.

4 Pay

70% on connection + 30% retention bonus at 6 months; clawback if churn < 3 months. Discounts only by manager, only in 3 cases.

CAC = acquisition_cost_inr summed per lead source ÷ activations from that source. Model weights trained on smb_leads.csv.

Every status chase raises churn — the tracker replaces chasing

n = 34, 84, 137, 70, 43 customers. NPS falls from 7.5 to 6.0.

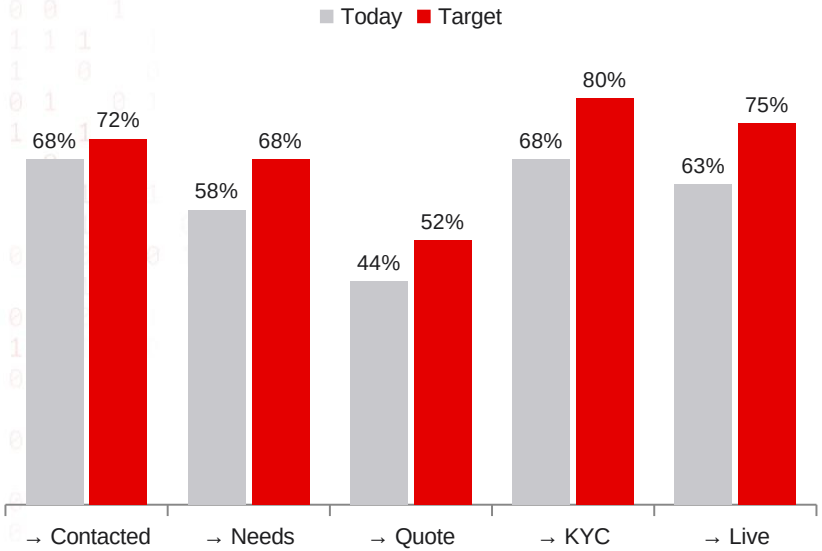

Tracker — what the owner sees

- ✓ Order placed
- ✓ Payment received
- ✓ KYC verified
- ✓ Feasibility confirmed
- ✓ Technician assigned
- 6 Installation (per product)
- 7 Live
- 8 First bill

DESIGN: ETA = longest install time in the bundle. Late by > 1 day → auto-escalation to the manager and a message to the owner before they need to ask.

Source: activated leads in smb_leads.csv (customer_follow_up_calls, churned_within_6_months, nps_score).

Business case: same 5,000 leads, ~764 activations instead of 368

Fixes per step: owner-initiated + verified number · no visit · instant need-based quote · registry/DigiLocker KYC · feasibility before checkout + tracker.

Per quarter of 5,000 leads	Today	Target
Activations / quarter	368	**~764**
Activation rate	7.4%	**15.3%**
New MRR / quarter	₹25,39,200	**₹52,71,600**
Annualised new revenue	₹3.0 Cr	**₹6.3 Cr**
CAC / activation	₹15,053	**≤ ₹5,000**
Payback (revenue months)	2.2	**0.7**

FOR THE OWNER: One bill, one number, live in days — a tier-2 clinic gets fibre, email ×8, backup, security and 2 CCTV for ₹3,688/mo.

Targets are proposals. MRR at median bundle ₹6,900/mo (mean ₹12,351). CAC target: experts only on AI-routed leads.

How we'll measure it, roll it out and de-risk it

Success metrics

Lead → activation	7.4%	≥ 15%
Days lead → live	17.6	≤ 7
CAC / activation	₹15,053	≤ ₹5,000
6-month churn	15.2%	≤ 10%
Status chases / customer	3	< 1

Also tracked: share closed by AI alone, products per customer (4.49 today), discount rate, NPS.

Rollout

1. **0–3 mo · Pilot**
   2 tier-2 cities, professional offices + multi-site; partners onboarded as Local Accel Experts.
2. **3–6 mo · Wave 1**
   All tier-1/2 cities for wave-1 segments; voice in 11 languages; DigiLocker live.
3. **6–12 mo · Wave 2**
   Micro digital starter (WhatsApp/web-led), manufacturers expert-led; national.

Risks → mitigation

AI says something wrong
Rules pick products/prices; number & promise guard

Regional voice quality
Chat fallback; questions fixed in code

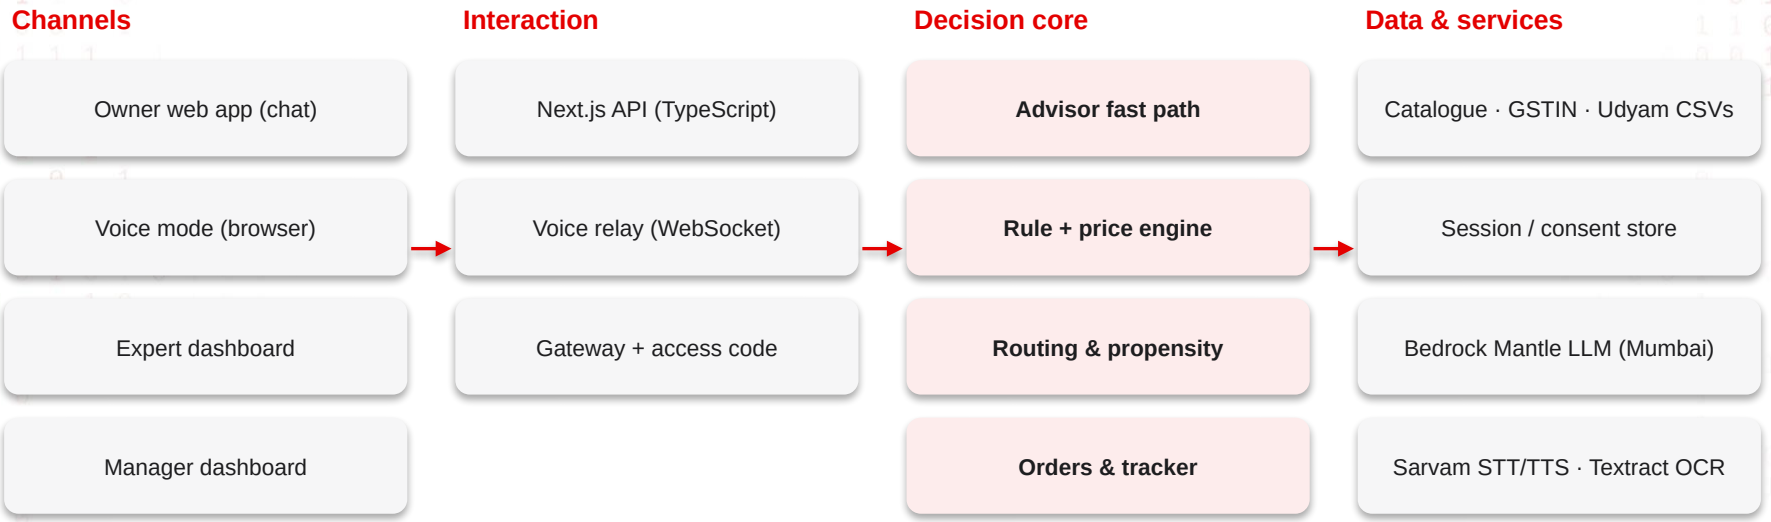

Partners resist
Paid on connection; AI sends them warm leads

Data residency / DPDP
Mumbai region; consent + retention limits

Fibre not feasible
Check before checkout; 5G AirFiber fallback

Baselines: smb_leads.csv. Targets and rollout are proposals.

Appendix A · Solution architecture

Flow: owner speaks/types → facts extracted (any language) → rule engine builds and prices the bundle → LLM phrases the reply (guarded) → KYC checks against registries + OCR → order → tracker updates; AI-unclosed leads → routing → expert / manager.
Privacy: images processed in memory and discarded; identifiers masked in UI and logs; consent log per purpose; production on AWS Mumbai.

Prototype code: private repo jntbatra/udyam-digital.

Appendix B · Data privacy and security choices

Notice & consent

Plain-language notice in the owner's language before KYC; separate consents for KYC, voice, expert hand-off and marketing (marketing off by default); every consent logged with time and notice version; withdraw anytime.

Purpose limitation

KYC data used only to verify the business and fulfil the contract; never reused for marketing or profiling beyond the stated purpose.

Data minimisation

GSTIN/Udyam registry and DigiLocker pulls before any upload; only missing documents requested; experts see only name, business, area and draft plan, phone revealed after hand-off consent.

Storage limitation

Uploaded images read in memory and discarded; extracted fields kept for the contract period; voice transcripts 30 days; non-converted leads deleted after 90 days unless marketing consent.

Security

Identifiers masked in UI and logs (e.g. 32TT*******1ZW); no personal data in app logs; credentials only server-side; role-based views for owner, expert, manager; access-code gateway in the prototype.

Rights & residency

Privacy center: view, withdraw, download, delete. Production hosting and LLM inference in AWS Mumbai (ap-south-1); processors (AWS, Sarvam) disclosed in the notice.

Synthetic data only in the prototype. Legal citations to be verified.
